

Undergraduate developer shipping production web interfaces in Next.js, TypeScript and WebGL, and wiring LLM features that keep sensitive data client-side. Three deployed products, each led end to end – architecture, API design, and the team that built it.

EDUCATION

B.Tech, Computer Science — AI & Machine Learning

Expected 2030

Coursework: Data Structures & Algorithms, Object-Oriented Programming, Linear Algebra, Applied Physics.

TECHNICAL SKILLS

LANGUAGES	TypeScript, JavaScript, Python, C/C++, SQL, HTML5/CSS3
FRONTEND	Next.js, React, Vite, Tailwind CSS, Framer Motion, Lenis, React Three Fiber (Three.js / WebGL)
BACKEND & CLOUD	Supabase, REST APIs, Git, GitHub, Vercel
AI & LLM	Gemini API integration, prompt engineering, client-side PII masking, AI-assisted prototyping

SELECTED PROJECTS

DocLens AI

Gemini API · TypeScript · React · Tailwind

- Built a document-intelligence prototype that parses dense records and answers contextual questions against them.
- Redacts national ID and financial identifiers client-side before any API call — sensitive data never leaves the browser.
- Led the developer team across design, API orchestration and deployment.

HappyNest Clinic

Next.js · React · Tailwind · Vercel

- Shipped a mobile-first pediatric clinic platform with dynamic consultation pricing and emergency contact routing.
- Added doctor-verified immunization tracking and automated WhatsApp handoff for appointment workflows.
- Tuned layout and client state for smooth use on low-bandwidth Android devices.

Interactive 3D Portfolio

React Three Fiber · Framer Motion · Lenis

- Engineered scroll-driven physics with Lenis and interactive WebGL model rendering in React Three Fiber.
- Composed modular Tailwind components with zero-layout-shift micro-interactions.
- Set up continuous deployment on Git and Vercel for always-on hosting.

LEADERSHIP & HACKATHONS

Team Leader — Tech Titans

Smart India Hackathon 2026

- Owned system architecture and the technical proposal for national-scale vocational training outcome tracking.
- Directed agile task distribution, documentation and prototype deliverables across the team.
- Maintained repository standards and ran API design reviews so cross-functional contributors could ship without friction.

RESEARCH & WRITING

Technical Synthesis on AI Capabilities & Infrastructure — 47-page analysis of modern foundational models, inference infrastructure, and the shift toward multimodal architectures.
