

First-year CSE (AI & ML) student building production web interfaces in React, TypeScript and WebGL. Two deployed products, led end to end – one built with a team, one solo.

TECHNICAL SKILLS

LANGUAGES	TypeScript, JavaScript, Python, C/C++, SQL (MySQL), HTML5/CSS3
FRONTEND	React, TanStack Start, Next.js, Vite, Tailwind CSS, Framer Motion, Lenis, React Three Fiber (Three.js / WebGL)
BACKEND & CLOUD	Supabase (auth + Postgres), REST APIs, Git, GitHub, Vercel
AI	Prompt engineering, AI-assisted rapid prototyping

EDUCATION

B.Tech, Computer Science — AI & Machine Learning

Expected 2030

Relevant coursework in progress: Data Structures & Algorithms, Object-Oriented Programming, Linear Algebra, Applied Physics.

SELECTED PROJECTS

HappyNest Clinic

TanStack Start · React · Supabase · Tailwind

- Shipped a mobile-first pediatric clinic platform with dynamic consultation pricing (₹400 new / ₹300 follow-up) and emergency contact routing.
- Built doctor-verified immunization tracking against the IAP checklist, with a sign-off queue and automated WhatsApp handoff for appointments.
- Tuned layout and client state for smooth use on low-bandwidth Android devices.

Interactive 3D Portfolio

Next.js · React Three Fiber · Framer Motion · Lenis

- Engineered scroll-driven physics with Lenis and interactive WebGL model rendering in React Three Fiber.
- Cut hero payload 94% (39 MB → 2.4 MB) by simplifying a 1.4M-triangle scan mesh and applying Meshopt compression.
- Set up continuous deployment on Git and Vercel for always-on hosting.

INDEPENDENT RESEARCH

Technical Synthesis on AI Capabilities & Infrastructure

47 pages · self-directed

Independent, book-length analysis of foundational models, inference infrastructure economics, and multimodal architectures — written outside coursework.

LEADERSHIP & HACKATHONS

Team Leader — Tech Titans

Smart India Hackathon 2026

- Owned system architecture and the technical proposal for national-scale vocational training outcome tracking.
- Directed agile task distribution, documentation and prototype deliverables; ran API design reviews and set repository standards.
- DocLens AI (concept & pitch)** — led the design of a document-intelligence tool with client-side redaction of ID and financial identifiers before model calls; authored the pitch and architecture decks.
